

**Electronic Manufacturing &  
Engineering Services**

August 6, 2015

**\*\*\* For Immediate Release \*\*\***

EIT, LLC a Sterling, VA based Electronic Manufacturing Services (EMS) provider is excited to announce it will be relocating its Northern Virginia (NOVA) operations to the Oaklawn section of Leesburg, VA. EIT will custom-build a new 70,000 square foot manufacturing and operations facility that is expected to be ready for occupancy by September, 2016.

David Faliskie, President of EIT, summarized the announcement as “A wonderful opportunity for EIT. The move will allow our team in NOVA to efficiently and cost effectively work from one facility in Leesburg. EIT wishes to remain competitive and a leader for our customers. We have worked closely with Oaklawn Development Partners and the Town of Leesburg to make this possible, and we are very excited to be able to merge our operations & headquarters into this new Leesburg facility. Easy access to Leesburg Executive Airport and local transportation infrastructure make the site a very attractive and pleasant location for both our employees and customers. EIT headquarters and manufacturing will remain in NOVA. We will continue to operate our facilities in Danville, VA and Salem, NH and with their support and manufacturing capacity we expect the move to Leesburg to be smooth for our customers.”

Kristen Umstatt, Leesburg Mayor, said “I am thrilled about EIT’s decision to make Leesburg their home. Our Economic Development staff has been paving the way for this move and I foresee a very bright future for both EIT and the Town”.

Marantha Edwards, Economic Development Director for the Town of Leesburg added, “Their expertise in design through fulfillment is key for their business success and the growth of this industry in Leesburg, which translates into job creation and a positive impact on the sense of community in Leesburg.”

Joe T. May, EIT Founder and Chief Technology Officer (CTO) as well as a former 20 year member of the Virginia House of Delegates said, “We’ve looked at Leesburg as a potential home for quite some time. Leesburg has welcomed us and we are very pleased to finally be in position to move our operations.”

**About EIT**

Founded in 1977, EIT provides contract electronic manufacturing services, along with engineering and support services for customers in the medical, instrumentation, communications, industrial control, security, and aerospace and defense markets. EIT’s capabilities and resources include electro-mechanical assembly, engineering design, machining & sheet metal and cabling & wire harness fabrication. EIT’s Quality Management System is ISO 9001, AS9100 and ISO 13485 registered. In addition, EIT is ITAR and FDA registered. EIT’s Instrument Markets group designs, builds, sells and services a line of UV radiometers and process control solutions that are sold worldwide.
